Comprehension:

Read the passage given below and answer the questions that follow:

Helena Blumen, a cognitive scientist at Albert Einstein College of Medicine in New York City, says the intricate mental multitasking that dance requires engages various parts of the brain at the same time, which can lead to the strengthening of neural connections across different regions. Basically dancing requires more brain power than simpler repetitive exercises.

Anyone who's ever felt the irresistible urge to sway to a favourite song knows that combining music and movement can lift your mood and melt away stress. But there's lot more happening in your brain when you're trying to follow even the easiest choreography.

In dance, we have to learn patterns, we have to think symmetrically and asymmetrically, we have to remember sequences. The effect extends beyond dance class to the real world. Tasks like navigating the kitchen or walking to the bus stop can become more attainable if they are regarded as choreography.

SubQuestion No : 46**Q.46**

According to the passage, how does dance help a person?

1. By increasing stress levels
2. By lowering Physical fitness
3. By lifting mood and reducing stress levels
4. By improving Mathematical ability

Comprehension:

Read the following passage and answer the questions: (Q. No. 91-95)

There is a high potential for generation of renewable energy from various sources like wind, solar, biomass, small hydro and cogeneration bagasse in India. The total potential for renewable power generation in the country as on 31.03.2022 is estimated at 14,90,727 MW. This includes solar power potential of 7,48,990 MW (50.24%), wind power potential of 6,95,509 MW (46.66%) at 120m hub height, SHP (Small-hydro power) potential of 21,134 MW (1.42%), Biomass power of 17,538 MW (1.18%), 5,000 MW (0.34%) from bagasse-based cogeneration in sugar mills and 2,556 MW (0.17%) from waste to energy. The geographic distribution of the estimated potential of renewable power as on 31.03.2022 shows that Rajasthan has the highest share of about 18.2% (271219 MW). This is followed by Gujarat with 12.1% (share 180215 MW). Maharashtra and Karnataka come next with a 11.2% and 10.3% share (166743MW and 154162 MW respectively). These four (4) states are having more than 50% of the total potential of Renewable Power in India.

SubQuestion No : 141**Q.141**

Which state has the highest share of geographic distribution of renewable power as per the data on 31st March 22?

1. Gujarat
2. Rajasthan
3. Maharashtra
4. Karnataka

There is a high potential for generation of renewable energy from various sources like wind, solar, biomass, small hydro and cogeneration bagasse in India. The total potential for renewable power generation in the country as on 31.03.2022 is estimated at 14,90,727 MW. This includes solar power potential of 7,48,990 MW (50.24%), wind power potential of 6,95,509 MW (46.66%) at 120m hub height, SHP (Small-hydro power) potential of 21,134 MW (1.42%), Biomass power of 17,538 MW (1.18%), 5,000 MW (0.34%) from bagasse-based cogeneration in sugar mills and 2,556 MW (0.17%) from waste to energy. The geographic distribution of the estimated potential of renewable power as on 31.03.2022 shows that Rajasthan has the highest share of about 18.2% (271219 MW). This is followed by Gujarat with 12.1% (share 180215 MW). Maharashtra and Karnataka come next with a 11.2% and 10.3% share (166743MW and 154162 MW respectively). These four (4) states are having more than 50% of the total potential of Renewable Power in India.

SubQuestion No : 142**Q.142**

Solar power potential accounts for

1. 50.24% of total potential
2. 46.66% of total potential
3. 1.42% of total potential
4. 0.17% of total potential

Options

1. 1
2. 2
3. 3
4. 4

These four (4) states are having more than 50% of the total potential of Renewable Power in India.

SubQuestion No : 143

Q.143 The total potential for renewable power generation in India as on 31.3.22 is estimated at :

1. 21, 134 MW
2. 6,95,509 MW
3. 14,90,727 MW
4. 7,48,990 MW

Options 1.1

2. 2
3. 3
4. 4

Comprehension:

Read the following passage and answer the questions: (Q. No.-96-100)

Sustainable textiles has centered around the fiber manufacturers making a switch to organic cotton or creating fabrics from natural, easily – renewable materials like bamboo or hemp. But very little attention has been paid to the dyeing process which can be potentially devastating industry when it comes to chemicals, waste and water uses.

4000 years ago man used water to carry dye to a piece of fabric. Early water pollution was born. Since then, more and more chemicals have been added to colour fabric, producing ongoing and ever worsening water pollution. Today the World Bank estimates that 17-20% of industrial pollution comes from textiles colouring and treatment. They have also identified 72 toxic chemicals in our water solely from textile dyeing, 30 of which are permanent. In traditional dyeing to colour just one piece of fabric can take 7 to 75 gallons of water per pound of fabric.

Air Dye technology, from a California – based sustainable technology company, is a solution our planet needs today. Air Dye technology prints and dyes without consuming water or emitting pollutants. By using air instead of water to infuse colour into the fabric, the technology reduces water consumption and pollution.

SubQuestion No : 146

Q.146

A sustainable technology of colouring textile is -

1. Dyeing technology
2. Traditional dyeing technology
3. Air-Dye technology
4. Water - Dye technology

Options

1. 1
2. 2
3. 3
4. 4

By using air instead of water to infuse colour into the fabric, the technology reduces water consumption and pollution.

SubQuestion No : 147

Q.147 Air - Dye technology reduces the water consumption and pollution by -

1. Infusing the colour through air
2. Dissolving the colour in dye bath
3. Boiling the colour in water
4. Pasting the colour on fabric

Options

1. 1
2. 2
3. 3
4. 4
